LOOK AT ME – I'M GREEN

The transformation from waste to new high-quality raw material is based on modern technology.

Our Green Plastic enables circular solutions for a cleaner environment.

REDUCING LOSS OF VALUABLE RESOURCES

A great number of discarded and obsolete fishing gears, ropes and trawls are not added to the recycling economy.

This plastic litter escapes circularity routes mainly as a consequence of poor waste management and is estimated today to be approx. 1% of the total plastic waste globally.

GREEN EDITION

The new generation of cultivation products. The Romberg Green Edition sustainably promotes maritime reprocessing and transforms waste into new attractive and durable products.

NEU

Durch die spezifischen Materialeigenschaften wird jedes Produkt zum Unikat und zeichnet sich durch besondere Oberflächenstrukturen und Eigenheiten aus. Sie sind durch ihre kleinen Schönheitsfehler "unperfekt perfekt". Als Ergebnis einer nachhaltig geförderten Wertschöpfungskette findet maritimer Kunststoff bei uns ein zweites Leben in Form von Anzucht- und Gartenprodukten.

NOUVEAUX

Grâce aux propriétés spécifiques des matériaux utilisés, chaque produit est unique et se distingue par un aspect exclusif et à chaque fois différent. Ils sont « imparfaitement parfaits » en raison de leurs petites différenciations. Résultat d'une chaîne de création de valeur durable, le plastique marin trouve chez nous une seconde vie sous forme de produits de culture et de jardinage.

NEW

Due to the specific material features, each product becomes unique and is characterized by special surface structures and peculiarities. They are "imperfectly perfect" due to their small blemishes. As the result of a sustainably promoted value chain, maritime plastic finds a second life with us in the form of cultivation and garden products.

* All products are produced with green energy from renewable resources (certified under the European Energy Certificate System, EECS-GoO). For the production of the Green Edition we use maritime plastics in many product parts. We actively strengthen the recycling economy. Cover and design ring are not made of maritime plastics.
